Visit Details

- **Reason for Visit:** Emergency admission for severe fatigue and fluid retention.
- **Symptoms:** Severe fatigue, swelling in the legs, shortness of breath, and decreased appetite.
- **Duration:** Symptoms worsening over the past week.
- **Date of Visit:** October 10, 2024
- **Physical Exam Findings:**
 - Blood Pressure: 170/95 mmHg
 - Heart Rate: 90 bpm
 - Respiratory Rate: 22 bpm
 - Oxygen Saturation: 92% on room air
 - Significant lower extremity edema
 - Pale appearance with signs of dehydration

Diagnosis

Assessment: Acute exacerbation of chronic kidney disease, fluid overload, and possible congestive heart failure due to poor kidney function.

Treatment/Plan

- **Medications Prescribed:**
 - Amlodipine 5 mg daily (for blood pressure management)
 - Furosemide 40 mg twice daily (to manage fluid overload)
 - Epoetin alfa 4000 units weekly (for anemia management)
 - Calcium carbonate with meals (to manage phosphate levels)
 - **Follow-Up Recommendations:**
 - Regular dialysis sessions at an outpatient center, three times per week.
 - Dietary modifications to a low-sodium, low-potassium diet.
 - Home monitoring of blood pressure and blood glucose levels.
 - Scheduled follow-up appointment with the nephrologist in 1 week.
 - **Lab Tests and Imaging Ordered:**
 - Complete Blood Count (CBC)
 - Renal Panel (BUN, Creatinine, Electrolytes)
 - Chest X-ray (to check for pulmonary congestion)
-

Duration of Stay

- **Length of Stay:** 10 days in a private room for treatment.
